

Bankruptcy risk solution suite

From first notice to final recovery.
One connected workflow.

Bankruptcy is not a single event, it's a lifecycle. Organizations need to detect filings quickly, manage high volumes of notices, track case activity, and recover what they're owed. Disconnected tools create gaps, delays, and missed opportunities.

G2 Risk Solutions helps organizations reduce risk, streamline manual workflows, and respond confidently throughout the bankruptcy lifecycle.

1

DETECT

It starts with awareness. The moment a bankruptcy is filed, organizations need to know immediately to avoid compliance risk and stop inappropriate collection activity.

Portfolio Monitoring, your first and most critical line of defense, alerts you the moment a bankruptcy is filed.

Military Status Monitoring (SCRA) and **Deceased Monitoring** flag protected or high-risk accounts requiring specialized handling.

2

MONITOR

After a filing, **the challenge becomes managing everything** that follows. Notices, court activity, deadlines, and case developments quickly become difficult to track without manual PACER review.

Our Bankruptcy Noticing Center centralizes notices into structured automated workflows so nothing is missed and teams can respond faster.

Bankruptcy Case Search gives you direct, on-demand access to court records.

Docket Event Monitoring tracks key developments after the initial filing so teams can identify the next required action.

3

FILE

As cases progress, **filing accuracy and timing become critical**. Manual claim filing is slow and error-prone, payment changes are easy to miss, and incorrect claim transfers create risk.

Proof of Claim automates claim preparation and filing.

Payment Change Notice keeps account information current as terms change.

Transfer of Claim maintains accurate ownership records throughout the bankruptcy lifecycle. Together, these workflows reduce risk and help teams respond faster.

4

RECOVER

Recovery doesn't end with filing. Payments do not always match to the right claims, and recovery visibility can quickly become unclear.

Payment Allocation & Claims Tracking helps teams match, allocate, and track every dollar while managing trustee disbursements and confirming payments with less manual work.

See it in action. Each step in the Bankruptcy Risk Solutions workflow is powerful on its own, but fully transformative when connected. g2risksolutions.com/contact/
