

Electronic Identification

Verify user identities instantly with trusted electronic identities (eIDs) from governments, banks, and telecom providers for seamless identity validation.

Streamline your user experience

Enable secure authentication and digital signatures without disrupting the user journey.

Comply with regulations

Meet regulatory requirements effortlessly with a fully compliant eID solution.

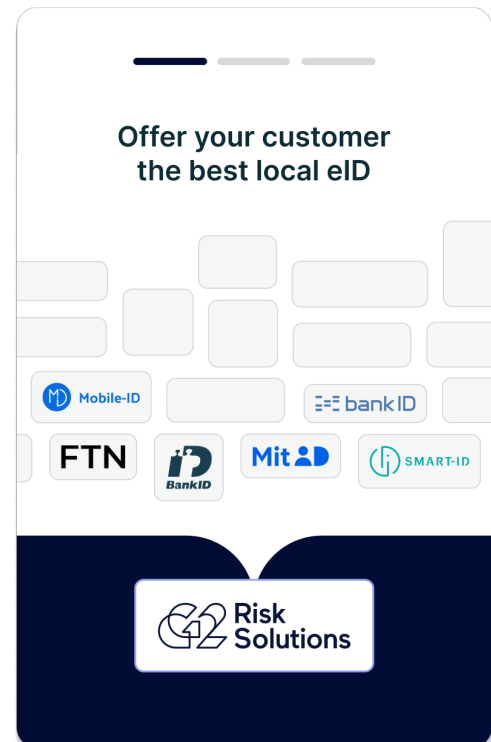

Enable global scalability

Expand into new markets with eID solutions tailored to multiple jurisdictions.

Benefits

Enhance secure identity verification

- Establish credibility with eIDs from governments, banks, and telecom providers.
- Integrate within days with developer-friendly solutions and onboarding support.
- Prevent identity fraud, account takeovers, and unauthorized access.
- Enable hassle-free electronic signatures while we handle the maintenance.

Key features

Authenticate users

Enable users to authenticate with eIDs for the most secure and user-friendly login experience.

Sign transactions

Allow users to digitally sign messages or transactions with their personal eID, ensuring a seamless and secure process.

One integration for all eIDs

By leveraging the existing eID ecosystem, businesses eliminate the need to develop verification methods from scratch, simplifying implementation.

Pick and choose your eID

G2RS offers a selection of eID solutions from various countries, ensuring compliance and seamless user experiences across multiple markets:

BankID Sweden

BankID Norway

MitID

SMART-ID

Smart-ID

Mobile-ID

Mobile-ID

FTN

Finnish Trust Network
